

## Wednesday Challenge Form

Group Members: Max and Sona

**Problem Statement:** Everybody in the class need to use teamwork skills. Each paired with a partner, one person is the builder and one will be the instructor during the challenge. 30 seconds are given to each pair to finish building the model.

**Approach:** Every pair gets a chance to build the model given below. The model will be continued to get built by every pair as we cooperate together. Max and I planned that we should choose a part where it will help to determine the parts and identify them easier. Since I was the instructor, I tried to lead Max tapping the floor to create a sound. We accomplished successfully with the bottom green-blue-red part.

**Solution:** The class should have discussed where to start because the parts ended up confusing others when it was reflected or misplaced.
