

Wednesday Challenge Form

Group Members: Raul, Sona

Problem Statement:

Using a sketch up tool, make a model of the capital letter A. Each group will receive another model from a different team to make it out of a cardboard.

Approach:

I was absent on Wednesday because of the field trip.

The challenge continued until Thursday and I had to work with Raul. The model was in someone else's computer who was absent. We started off later than others and could not finish the model of capital letter A. The model of capital letter A had too much detail to finish quickly. The judges graded the models by the difference between actual CAD and added all of the differences up and subtracted the total from 10.

Solution: Keilah's group won the challenge. They had the least difference from the model they made and what was given.

Lessons Learned: If I would do this challenge again, I would make sure I take a look at the model more carefully and work quickly. It takes some times to draw out the letter on the cardboard with the correct measurements and cut it out.
