

Wednesday Challenge Form

Group Members: Jess, John, and Sona

Problem Statement:

Fidget toys are great self-regulation tools to help with focus, attention, calming, and active listening. Design a fidget toy that is cool, fun and has 589 on it somewhere. It can't make any noise or fly.

Approach:

The challenge works the same as last week. The toy that won the last week's challenge was not allowed because we can't have a flying object. Matty came up with another challenge that each team have to come up with a design of a fidget toy. We decided to do something with the slime. Using the slime, we will fill the balloon that has 589 written on. Our design was presented for the judges showing the price and how it would look like when it is made. To make the our fidget toy, we need a white glue, water, water balloons and a borax. It can be simply done by mixing the correct ratio of water, borax, and glue.

Solution: Christian's group won the challenge this week. They had the stress ball idea that filled water balloon with slime and rice for the texture. It's fun cute and affordable.

Lessons Learned: If I would do this challenge again, I would try to make the price lower. The budget takes huge part of it and it is hard to keep it under \$.50
